## Ligos and SeaChange Partner to Co-develop New MPEG Transcoding Technology

**San Francisco, CA - (April 3, 2003)** Ligos Corporation today announced that it has co-developed a new MPEG transcoder with SeaChange International, a leading provider of digital video systems for television.

"We're extremely pleased to be able to work with SeaChange to offer its customers greater flexibility for their MPEG-2 encoding requirements," said Mark Koziol, President and CEO of Ligos Corporation. "Our partnership with a customer of the caliber of SeaChange is a further endorsement of the work we've been doing for years, and a confirmation that the time has come for an alternative to less flexible encoding solutions."

The announcement follows Ligos' recent introduction of MediaRig, a family of modular, multi-standard encoding and transcoding products that provide high performance and pristine quality in a variety of formats. MediaRig Core provides the underlying MediaRig software engine to broadcast and professional video system developers to meet application-specific encoding requirements, and to provide an alternative to the complexities, costs and boundaries associated with MPEG encoding hardware.

Broadcast and professional video system developers interested in previewing new products and technologies from Ligos are invited to visit at the NAB 2003 show at the Las Vegas Convention Center, April 5-10 2003, in the South Hall at Booth #SL1656.

### **About Ligos Corporation**

Headquartered in San Francisco, California, Ligos Corporation is a leading worldwide provider of software-only media stream management products such as MediaRig Core and GoMotion. Since 1997, Ligos has been a leader in video compression, delivering real-time software codecs and video tools designed to run on standard platforms. For more information on Ligos Corporation, its products or licensing, visit our Web site at <http://www.ligos.com> or call 1 (415) 249-0100.

### **About SeaChange**

SeaChange provides digital video systems that are changing television. Its powerful server and software systems enable television operators to provide new on-demand services and to gain greater efficiencies in advertising and content delivery. With its Emmy-winning MediaCluster technology, thousands of SeaChange systems are helping broadband, broadcast and satellite television companies to streamline operations, expand services and increase revenues. SeaChange is headquartered in Maynard, Massachusetts and has product development, support and sales offices throughout the world. Visit <http://www.seachangeinternational.com> .
